Work Experience

Founder & Software Consultant **June 2026 – Present**
Alderwood Software *British Columbia, Canada*

- Secured and manage a **$10,000 website redesign and implementation engagement**, owning delivery from discovery through launch.
- Led stakeholder discovery and delivered the **first-round design package**, defining a Next.js site with technical SEO and Microsoft 365-integrated forms.

Data Engineer Co-op **January 2025 – December 2025**
Samsung R&D Canada *Vancouver, BC*

- Implemented and tested Scala/Spark transformations for a daily pipeline supporting **one of Samsung Health's largest conformed datasets**.
- Owned GDPR analytics from design to production, building **two tables, two Spark pipelines and two Airflow DAGs** integrating DynamoDB and lakehouse data.
- Built production Airflow DAGs and rerun-safe Spark jobs, enabling **safe reprocessing** for backfills and failed partitions.
- Created a reusable synthetic-data generator pattern and automated it across **133+ lakehouse tables** for local Spark testing.
- Built Tableau dashboards and **presented the system's design, results and limitations** to the team and senior engineers.

Projects

Mealpository — mealpository.com | *Angular, Django, PostgreSQL, Docker, GCP Vision* **January 2024 – Present**

- Built and operate a **live meal-planning platform used by approximately 30 registered users**, with recipe management, weekly planning and grocery-list generation.
- Built a **recipe digitization pipeline** combining Google Cloud Vision OCR with LLM-based extraction to convert photos into structured records matching the application data model.
- Redesigned the **PostgreSQL schema and Django REST API** with clearer relationships and resource-oriented endpoints for recipes, meal plans and grocery lists.
- Provisioned **AWS infrastructure with Terraform** using ECS/Fargate, RDS, S3, CloudFront and WAF, then migrated to a VPS to reduce cost and operational overhead.

HavenView — Write-up | *FastAPI, WebRTC, Docker, PostgreSQL, Redis, Cloudflare* **November 2025 – Present**

- Built and operate a **self-hosted home security platform** with ONVIF cameras, go2rtc/WebRTC streaming, FastAPI and local motion recording.
- Migrated from a **Raspberry Pi 5 to a dedicated Ubuntu server**, adding configurable retention and secure remote access through Cloudflare Tunnel and TURN.

Education

Simon Fraser University **September 2021 – 2027 (Expected)**
Bachelor of Science, Computing Science *Burnaby, BC*

Certifications

AWS Certified Solutions Architect – Associate — Amazon Web Services ***August 2025***

Technical Skills

Languages: Scala, C++, SQL, Python, TypeScript, JavaScript

Data Engineering: Apache Spark, Apache Airflow, Apache Iceberg, ETL, Data Modeling, DynamoDB, Tableau

Backend & Storage: Django, FastAPI, PostgreSQL, Redis, REST APIs

Cloud & Infrastructure: AWS, Terraform, Docker, Linux, Git, Nginx, Cloudflare

Web: React, Angular, Next.js, Tailwind CSS
